

RM ecoquiet® - Maximising resources and creating ideal teaching and learning environments

RM ecoquiet is an exciting technology created to address concerns over growing energy bills and noisy hardware disrupting teaching and learning in the classroom.

RM desktop PCs with ecoquiet inside are helping thousands of schools maximise resources and reduce impact on the environment.

Maximising resources

Energy

Schools using RM ecoquiet consume less energy. RM ecoquiet is specifically designed to use less power through all modes of use, up to two thirds less in some cases.

Budgets

With energy costs rising, using less energy makes financial sense too.

RM ecoquiet - Great for the planet and great for your school electricity budget.

Space

Schools using ecoquiet technology have greater access to ICT through a choice of classroom ready case styles that are robust, secure and compact.

The unique mix of sustainable components creates cooler, quieter, more comfortable classrooms.

Cool

Who wants to learn in a classroom that's an oven? RM ecoquiet runs cooler than conventional hardware.

Quiet

Fan cooling for conventional hardware can be noisy, especially in an ICT suite. Independent tests have shown that RM desktop PCs with ecoquiet inside are 'whisper quiet' which is 14dB(A) quieter than standard desktop PCs.

We can't keep pupils quiet for you, but we can certainly bring some hush to your hardware.

Go green without compromise!

A little saving today makes a big, big difference tomorrow.

RM PC with ecoquiet

Sustainable components in an RM desktop PC case

- The latest single core processor
- Genuine Microsoft Windows XP Professional under the Vista downgrade licence
- Secure and robust desktop case
